Unable to fetch classes from jar file. #177   New Issue

⊘ Closed   **zabell** opened this issue on 7 Jan · 10 comments

---

zabell commented on 7 Jan

Hello, I use javacomplete2 for my android projects, and have done so for a while.
I'm unable to omnicomplete after a recent update, I have a clean install with JDK8.
I've set the following without success.
autocmd FileType java setlocal omnifunc=javacomplete#Complete
let g:JavaComplete_LibsPath = "/opt/android/platforms/android-23/android.jar"

Also I used to have an .vimrc that is run for each project including classpaths.
let $CLASSPATH="/opt/android/platforms/android-23/android.jar:......"

Am i doing something wrong? Worked fine for me for months in 2015.

wsdjeg commented on 7 Jan

why do not use maven or gradle manager your android project? also can you show me you vimrc and
structure of you project?

zabell commented on 7 Jan

Hey I do use gradle for my projects, but i want the ability to just open anyfile, type import android. and get
the list. It has worked for me all of last year. It should just fetch the classes contained in the jar file, but it
seams that it doesn't.

zabell commented on 7 Jan

Sorry, any java file. Only java files should set the omnifunc.
autocmd FileType java setlocal omnifunc=javacomplete#Complete

wsdjeg commented on 7 Jan

ok;
can you try with this step
open a java file
then

```
:echo g:JavaComplete_LibsPath
```

show me the output
then

```
:JCdebugEnableLogs
```

try to complete `import android.`

then show me the out put of

```
:JCdebugGetLogContent
```

by the way ,if your using gradle ,I recommend you do not set g:JavaComplete_LibsPath and $CLASSPATH in your vimrc, just let `./gradlew` manager you classpath

zabell commented on 7 Jan

```
:echo g:JavaComplete_LibsPath
/opt/android/platforms/android-23/android.jar:.
```

```
import android.
Context: 3
DotExpr: android.
Communicate: -E "android" [s:GetMembers for static]

Communicate: -p "android" [s:DoGetInfoByReflection]
{}
```

wsdjeg commented on 7 Jan

how about delete `~/.javacomplete2` or

```
:JCcacheClear
```

zabell commented on 7 Jan

That solved my problem, was it that the cache is not updated?

wsdjeg commented on 7 Jan

yes , the cache updateed by the last update time of pom.xml or build.gradle,the plugin will compare it with the time of the cache file
